# Shifting ABAP Dynpro testing left

Lars Hvam Petersen
Senior SAP/ABAP Consultant at Heliconia Labs

October 23, 2026

**TLDR**: use open-abap-gui and Playwright for early dynpro testing, example at https://open-abap.github.io/open-abap-gui-example/playwright-report/

Many organizations still rely on ABAP Dynpros, but testing them in a shift-left, off-stack development setup has traditionally been difficult. open-abap-gui allows running dynpros in off-stack setups, making it easy to run tests and provide feedback to humans or LLMs.

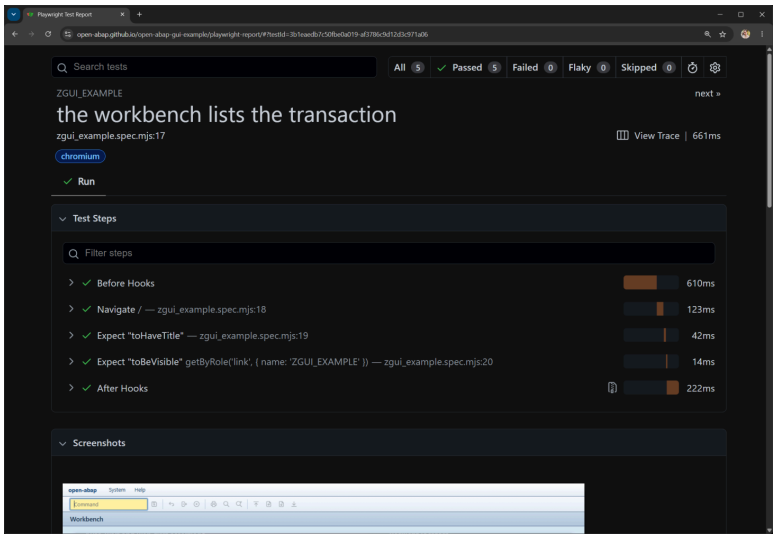

Playwright is Microsoft's open-source testing framework, widely used for web application testing. It's a familiar tool that AI agents can help you set up, and it also has an MCP server available. Your organization may already be using it. By testing Dynpro applications with it, you can easily, in the same script test any Fiori or React application alongside it.

Also make sure to design the specs so they can be re-used for on-stack testing! Run the spec on webgui and ideally get the same result, if not then there is something to be improved earlier in the feedback loop.

**What does this mean for your development workflow?**

Tests can live alongside your custom ABAP code and run as part of your CI pipeline. If a change breaks expected behavior, the team gets feedback directly in the pull request — long before manual and exploratory testing begins, and potentially even before a transport is created.

I made a small example, which generates a nice test report, keep all reports with videos and traces available for the team so everybody can check old results, and see what is being tested.

Report example

Shifting left and testing earlier aren't new ideas. They're established industry best practices. But in the ABAP world, implementing effective quality assurance has often been challenging. Dynpro testing is another step forward, building on existing practices such as static analysis and unit testing.

Of course, this setup will have bugs and rough edges, and there's room for improvement. But with modern testing tools and AI-assisted development, we have an opportunity to make progress faster than ever.
