open-abap-gui

Running ABAP GUI Dynpros off-stack

Lars Hvam Petersen
Senior SAP/ABAP Consultant at Heliconia Labs

October 16, 2026

TLDR: try it out at https://open-abap.github.io/open-abap-gui-preview-deployments/pr-208/

On team #off-stack we are shifting feedback left, moving quality checks to when the commit is made.

Static analysis is done

Unit testing is done

However, many customers have invested and is investing in GUI Dynpro based user interfaces, until now its been difficult to test these early.

open-abap-gui is a clean-room attempt to help ABAP developers iterate faster, try out changes before pulling to the central development system.

Preview deployments

This also allows for easy preview deployments, compile it all into a single html page, with the database and backend also running in the browser tab. You can share and iterate on this with your team without putting anything in a transport, also making it easy to throw away.

Easy branching

As always, in git/off-stack it allows for easy branching, want to try something out, yea, sure create a branch, see what happens!

LLM Enabler

LLMs will be able to see and iterate and try running the dynpros, ask it to do anything and it will typically figure it out. open-abap-gui will help making sure the LLM(or humans) do changes that work, long before end-users try running the code.

Try it out at https://open-abap.github.io/open-abap-gui-preview-deployments/pr-208/

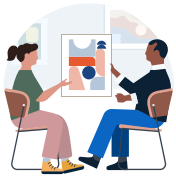

How to do the setup: "*see https://github.com/open-abap/open-abap-gui and set it up so I can run my dynpros off stack*" not tested 😅 things will be changing, but again, just point your LLM to fix it.

As always, probably lots of bugs to fix, but its easy now-a-days 🤠
