New screen

New screen for monitoring LLM usage, it runs ABAP

Lars Hvam Petersen ✓

July 17, 2026

I found myself constantly switching tabs or hovering via the mouse to check my LLM quotas, so what does one do?

Buy new toys!

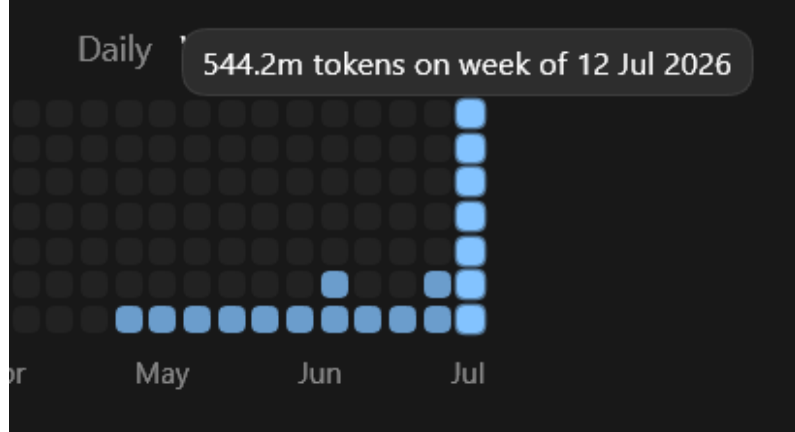

I got a [Corsair Xeneon Edge](#) which is a small 14 inch monitor with touch, then vibe coded a HTML frontend, and setup [open-abap](#) to run the backend part serving REST calls to the web frontend, and wrapped it in an [Electron](#) app.

It worked pretty well for [OpenRouter](#), as they have a documented nice REST API to call, so the ABAP code becomes https://github.com/larshp/abap-llm-monitor/blob/main/backend/providers/zcl_openrouter_client.clas.abap

For the others I had to do some workarounds hooking the ABAP code together with the JavaScript/Typescript SDKs for the different providers, its not pretty but it works 🐼

Feel free to have a go, its MIT licensed source at <https://github.com/larshp/abap-llm-monitor>

How do you keep track of your LLM usage? During the last week I've used Codex more than any other months(thanks to OpenAI for the resets).

Token usage during this week

500 million tokens on GPT 5.6 Sol, google estimates to between USD 2000 and USD 15000 if using baseline API pricing.

Wonder how long this party will go on 🤔
